

The OCEAN

- an environmental catastrophe

Sea damages caused by:

Erosion on beaches and along river systems
Industrial discharge in the atmosphere
Industrial discharge in the sea
Waste from aquaculture
Agricultural discharge
Household discharge
The size of fisheries
Use of bottom trawl
Construction work
Climatic change
Fish feed

Increased demands from society

Minimize damages
Increased restrictions
Increase habitat areas
Sustainable development
Compensating initiatives
Biodiversity requirements
CO2 binding through marine vegetation
Sustainable management of the resources
More complex regulations regarding harvest

Examples on regulations:

EU Water Directive
National and international agreements
CDM (Clean development mechanism)
(MSDF) EU Maritime Strategy Framework Directive
